

RD200 Radon Unit

All of the electronics on the RD200 PC Board is not used. Three traces are cut to disconnect this electronics. The Photon Board collects the data from the RD200M Sensor Unit. The data is sent via the Internet to a Blynk application running on an iPhone.

These 4 wires go through a hole in the top of the RD200 Unit and are soldered directly to the RD200 PC Board.
